

## **Contents**

### **0 Foreword**

### **1. Fundamentals of heat exchange, characteristic values and design**

### **2. Materials for flue-gas heat exchangers**

#### **2.1. Introduction**

#### **2.2. Boundary conditions for flue-gas heat exchangers**

#### **2.3. Corrosion**

#### **2.4. Tube material conditions for flue-gas heat exchangers**

##### **2.4.1. Enamelled tubes**

##### **2.4.2. Fluoroplastic coated carbon steel/stainless steel tubes**

##### **2.4.3. Nickel-based alloy tubes**

##### **2.4.4. Fully plastic pipes (AlWaFlon® or G-FLON)**

##### **2.4.5. Prospects/developments**

#### **2.5. Design and mode of operation**

#### **2.6. Summary of tube materials**

### **3. Flue-gas heat exchangers in waste incineration plants**

#### **3.1. Tasks of heat exchangers in waste incineration plants**

#### **3.2. Types of heat exchangers - design features**

#### **3.3. Realisation of a heat transfer cycle project for the flue gas heat utilisation using the example of MHKW Offenbach**

#### **3.4. Control of heat exchangers**

#### **3.5. Experience, operation, maintenance**

#### **3.6. Conclusion**

### **4. Flue-gas heat exchangers in fossil-fired power plants**

#### **4.1. Introduction**

#### **4.2. Heat utilisation systems**

#### **4.3. Summary**

### **5. Requirements for heat exchanger operation**

#### **5.1. Transport**

#### **5.2. Installation of compact heat exchangers and tube bundle heat exchangers**

#### **5.3. Commissioning**

#### **5.4. Thermal performance rating**

#### **5.5. Operation, responsibilities of power plant operator**

#### **5.6. Operating experience, service, inspection, and maintenance**

#### **5.7. Troubleshooting**

### **6. CFD-Simulation for heat exchangers**

### **7. Directives, rules and standards/sources of information, bibliography**
